

## Nuclear Receptor Subfamily 6 Group A Member 1 (NR6A1) Antibody

Catalogue No.: abx026203

This gene encodes an orphan nuclear receptor which is a member of the nuclear hormone receptor family. Its expression pattern suggests that it may be involved in neurogenesis and germ cell development. The protein can homodimerize and bind DNA, but *in vivo* targets have not been identified. The gene expresses at least alternatively spliced transcript variants.
