DAB Chromogen Kit

Catalogue No.: abx097197

Immunohistochemical analysis staining in human breast carcinoma formalin fixed paraffin-embedded tissue section, using DAB Chromogen Kit. The section was then counterstained with haematoxylin and mounted with Neutral Gum.

DAB (3,3'-Diaminobenzine) is a widely used chromogen for immunohistochemical staining. In the presence of HRP (Horseradish Peroxidase), DAB produces a brown precipitate that is insoluble in ethanol. This kit is suitable for immunohistochemistry, immunoblot and dot blot applications.

Tested Applications:

IHC

Storage:

Store at 4°C.

Note:

This product is for research use only.
