TMB ELISA Substrate

Catalogue No.: abx098248

TMB ELISA Substrate is a ready-to-use chromogenic substrate for detection of horseradish peroxidase (HRP) activity. HRP can catalyze 3,3',5,5'-tetramethylbenzidine (TMB) to yield a blue color, the maximal absorbance is at 370 nm or 620-652 nm; however, upon addition of the stop solution, the solution turns to yellow and can be measured at 450 nm.

Target: TMB ELISA Substrate

Storage: Store at -20°C. Stable for 12 months from date of receipt.

Note: This product is for research use only.
