

Mammalian Nuclear and Cytoplasmic Protein Extraction Kit

Catalogue No.: abx098854

Mammalian Nuclear and Cytoplasmic Protein Extraction Kit provides a simple and efficient way to separate and extract nuclear and cytoplasmic protein from mammalian cells and tissues. Native proteins can be obtained within 80 minutes without ultracentrifugation. The extracted protein is suitable for a variety of downstream applications, including SDS-PAGE, Western Blot, ELISA, enzyme-activity assays, immunoprecipitation and transcription factor activity analysis.

Target: Mammalian Nuclear and Cytoplasmic Protein

Storage: Store at -20°C. Stable for 12 months from date of receipt.

Note: This product is for research use only.
