

Mammalian Mitochondria Isolation Kit for Cultured Cells

Catalogue No.: abx098856

Mammalian Mitochondria Isolation Kit for Cultured Cells provides a fast and efficient way to isolate mitochondria from cultured mammalian cells. This kit provides two options for the separation of mitochondria from cytosolic components: a reagent-based method or homogenization base method. Reagent-based method allows multiple samples to be processed concurrently with a mild procedure. The isolated mitochondria are suitable for a variety of downstream applications, including protein analysis, apoptosis, signal transduction and metabolic studies.

Target: Mammalian Mitochondria Isolation Kit for Cultured Cells

Storage: Store at -20°C. Stable for 12 months from date of receipt.

Note: This product is for research use only.
