Description

S100 calcium binding protein A10 (S100A10/P11), it is a member of the S100 family of proteins containing 2 EF-hand calcium-binding motifs. S100 proteins are localized in the cytoplasm and/or nucleus of a wide range of cells, and involved in the regulation of a number of cellular processes such as cell cycle progression and differentiation. S100 genes include at least 13 members which are located as a cluster on chromosome 1q21. This protein may function in exocytosis and endocytosis.

Immunogen

Purified recombinant fragment of human P11 expressed in E. Coli.

Formulation

Ascitic fluid containing 0.03% sodium azide.

S100A10/P11 Antibody - Protein Information

Name S100A10

Synonyms ANX2LG, CAL1L, CLP11

Function

Because S100A10 induces the dimerization of ANXA2/p36, it may function as a regulator of protein phosphorylation in that the ANXA2 monomer is the preferred target (in vitro) of tyrosine-specific kinase.
