PRDM8 Antibody (N-term) - Protein Information

Name PRDM8

Synonyms PFM5

Function

Probable histone methyltransferase, preferentially acting on 'Lys-9' of histone H3 (By similarity). Involved in the control of steroidogenesis through transcriptional repression of steroidogenesis marker genes such as CYP17A1 and LHCGR (By similarity). Forms with BHLHE22 a transcriptional repressor complex controlling genes involved in neural development and neuronal differentiation (By similarity). In the retina, it is required for rod bipolar and type 2 OFF-cone bipolar cell survival (By similarity).

Cellular Location

Nucleus.

Tissue Location

Expressed in brain, heart, skeletal muscle, testes, prostate.
