

SOD (Cu/Zn) Antibody Catalog # ASM10378

Specification

SOD (Cu/Zn) Antibody - Product Information

Application IHC, WB
Primary Accession P00441
Other Accession NP_000445.1
Host Rabbit

Reactivity Insect, Human,

Mouse, Rat, Rabbit, Hamster, Monkey, Pig, Bovine, Xenopus, Dog, Fish, Sheep

Clonality Polyclonal

Description

Rabbit Anti-Human SOD (Cu/Zn) Polyclonal

Target/Specificity

Detects ~23kDa (human) and ~19kDa (other species).

Other Names

Superoxide dismutase1 Antibody, ALS1 Antibody, IPOA Antibody, SOD1 Antibody, SOD2 Antibody, SODC Antibody

Immunogen Human Cu/Zn SOD

Purification

Protein A Purified

Storage -20°C

Storage Buffer

PBS pH7.0, 50% glycerol, 0.09% sodium

azide

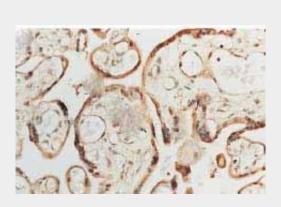

Shipping Blue Ice or 4°C

Temperature

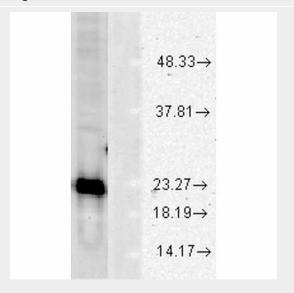

Certificate of Analysis

0.2 μ g/ml of SPC-116 was sufficient for detection of Cu/Zn SOD in 20 μ g of HeLa cell lysate by colorimetric immunoblot analysis using Goat anti-rabbit IgG:AP as the secondary antibody.

Cellular Localization
Cytoplasm

Immunohistochemistry analysis using Rabbit Anti-SOD1 Polyclonal Antibody (ASM10378). Tissue: Placenta. Species: Human. Primary Antibody: Rabbit Anti-SOD1 Polyclonal Antibody (ASM10378) at 1:100. Courtesy of: Courtesy of Joan Telfer, University of Glasgow.

Western blot analysis of Human Cell line lysates showing detection of SOD1 protein using Rabbit Anti-SOD1 Polyclonal Antibody (ASM10378). Load: 15 µg protein. Block: 1.5% BSA. Primary Antibody: Rabbit Anti-SOD1 Polyclonal Antibody (ASM10378) at 1:1000 for 2 hours at RT. Secondary Antibody: Donkey Anti-Rabbit IgG: HRP for 1 hour at RT.

SOD (Cu/Zn) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- <u>Immunofluorescence</u>
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

SOD (Cu/Zn) Antibody - Background

Superoxide dismutase (SOD) is an endogenously produced intracellular enzyme present in almost every cell in the body (3). It works by catalyzing the dismutation of the superoxide radical O2⁻ to O2 and H2O2, which are then metabolized to H2O and O2 by catalase and glutathione peroxidase (2,5). In general, SODs play a major role in antioxidant defense mechanisms (4).

There are two main types of SOD in mammalian cells. One form (SOD1) contains Cu and Zn ions as a homodimer and exists in the cytoplasm. The two subunits of 16 kDa each are linked by two cysteines forming an intra-subunit disulphide bridge (3). The second form (SOD2) is a manganese containing enzyme and resides in the mitochondrial matrix. It is a homotetramer of 80 kDa. The third form (SOD3 or EC-SOD) is like SOD1 in that it contains Cu and Zn ions, however it is distinct in that it is a homotetramer, with a mass of 30 kDA and it exists only in the extra-cellular space (7). SOD3 can also be distinguished by its heparin-binding capacity (1).
