**ZFYVE1 Antibody (N-term) Blocking peptide - Protein Information**

Name ZFYVE1

Synonyms DFCP1, KIAA1589, TAFF1, ZNFN2A1

**Function**

Plays a role in the formation of lipid droplets (LDs) which are storage organelles at the center of lipid and energy homeostasis (PubMed:&lt;a href="http://www.uniprot.org/citations/30970241"&gt;http://www.uniprot.org/citations/30970241"

**ZFYVE1 Antibody (N-term) Blocking peptide - Background**

The FYVE domain mediates the recruitment of proteins involved in membrane trafficking and cell signaling topophosphatidylinositol 3-phosphate (PtdIns(3)P)-containing membranes. This gene encodes a protein which contains two zinc-binding FYVE domains in tandem. This protein displays a predominantly Golgi, endoplasmic reticulum and vesicular distribution. Alternatively spliced transcript variants have been found for this gene, and they encode two isoforms with different sizes.
