

H1FX Antibody (C-term) Blocking peptide
Synthetic peptide
Catalog # BP13731b**Specification****H1FX Antibody (C-term) Blocking peptide -
Product Information**Primary Accession [Q92522](#)**H1FX Antibody (C-term) Blocking peptide -
Additional Information**

Gene ID 8971

Other Names

Histone H1x, H1FX

Target/Specificity

The synthetic peptide sequence used to generate the antibody AP13731b was selected from the C-term region of H1FX. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**H1FX Antibody (C-term) Blocking peptide -
Protein Information**Name H1-10 ([HGNC:4722](#))**Function**

Histones H1 are necessary for the condensation of nucleosome chains into higher-order structures.

**H1FX Antibody (C-term) Blocking peptide -
Background**

Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. Nucleosomes consist of approximately 146 bp of DNA wrapped around a histone octamer composed of pairs of each of the four core histones (H2A, H2B, H3, and H4). The chromatin fiber is further compacted through the interaction of a linker histone, H1, with the DNA between the nucleosomes to form higher order chromatin structures. This gene encodes a member of the histone H1 family.

Cellular Location

Nucleus. Chromosome.

Tissue Location

Expressed ubiquitously.
