AEBP2 Antibody (C-term) Blocking Peptide - Protein Information

Name AEBP2

Function

Acts as an accessory subunit for the core Polycomb repressive complex 2 (PRC2), which mediates histone H3K27 (H3K27me3) trimethylation on chromatin leading to transcriptional repression of the affected target gene (PubMed:15225548" target="_blank">15225548, PubMed:<a href="http://www.uniprot.org/ci

AEBP2 Antibody (C-term) Blocking Peptide - Background

DNA-binding transcriptional repressor. AEBP2 may interact with and stimulate the activity of the PRC2 complex, which methylates 'Lys-9' and 'Lys-27' residues of histone H3.
