

# Anti-Centromere Protein Antibody

---

 [antibodiesinc.com/products/anti-centromere-protein-antibody-15-234](https://antibodiesinc.com/products/anti-centromere-protein-antibody-15-234)

Anti-Centromere Antibodies (derived from human CREST patient serum) are useful as controls in ANA diagnostics and also react with other species including mouse, rat, and hamster.

Antisera

Lot dependent

Polyclonal

ICC

Human

n/a

Hamster, Human, Mouse, Rat

Liquid

Unconjugated

Serum obtained from an autoimmune patient was tested at a series of dilutions by immunocytochemistry on ethanol-fixed Hep2 cells that were in log-phase growth. The staining pattern obtained was consistent with the pattern expected for anti-centromere staining.

These antibodies are to be used as research laboratory reagents and are not for use as diagnostic or therapeutic reagents in humans.
