

Guinea-Pig Anti-PNMT Polyclonal Antibody

Catalog No.	PS256	Quantity:	50 μ l
Specificity:	Immunogen: Phenylethanolamine-N-methyltransferase, from bovine adrenal medulla. Tested on rat tissues. Positive control: DEPC-fixed paraffin sections of rat adrenal gland. Absorption with 10-100 μ g PNMT per ml diluted antiserum abolishes the staining.		
Applications:	Works on: Paraffin and frozen sections. 1:400-1:800 using immunofluorescence, with overnight incubation at +4°C.		
Product Form:	50 μ l undiluted, freeze-dried antiserum. Dissolve the antiserum in 50-100 μ l distilled water, and dilute further in 0.1M PBS with 1% BSA and 0.1% NaN ₃ .		

NOT FOR HUMAN USE. FOR RESEARCH ONLY. NOT FOR DIAGNOSTIC OR THERAPEUTIC USE.
