

Human Vaginal Fluid Single Donor

Catalog No.	CSI20379A	Quantity:	100 µl
	CSI20379B		250 µl

Description: Vaginal discharge is a fluid produced by glands in the vaginal wall and cervix that drains from the opening of the vagina. The amount and appearance of normal vaginal discharge varies throughout the menstrual cycle. An increase in the amount of vaginal discharge, an abnormal odor or consistency of the fluid, or pain that accompanies vaginal discharge can all be signs of infection or other disorders. Such disorders include (this is not an all inclusive list) bacterial vaginosis, yeast vaginitis, and vaginitis.

Source: Human Single Donor

Formulation: Liquid with no preservatives

Profiling: Specific human vaginal fluid donors by race available upon request. Specific disease state can be made available with lead time. We are able to profile human vaginal samples upon request. Vaginal secretions can be specified before or after ovulation.

Storage & Stability: Store at -20°C

NOT FOR HUMAN USE. FOR RESEARCH ONLY. NOT FOR DIAGNOSTIC OR THERAPEUTIC USE.
