Flow cytometric analysis of Human SELL(CD62L) expression on human whole blood lymphocytes. Cells were stained with purified anti-Human SELL(CD62L), then a FITC-conjugated second step antibody. The fluorescence histograms were derived from gated events with the forward and side light-scatter characteristics of viable lymphocytes.

Flow cytometry was performed on a BD FACSCalibur flow cytometry system. Please refer to www.sinobiological.com/Flow-Cytometry-FACS-Protocols-a-750.html for technical protocols.
