# Human SNRPA Gene ORF cDNA clone expression plasmid, N-HA tag

Catalog Number: HG16978-NY

**General Information** 

Gene: small nuclear ribonucleoprotein

polypeptide A

Official Symbol: SNRPA

**Synonym:** Mud1; U1-A; U1A

Source: Human

cDNA Size: 891bp (cDNA Size= Gene + linker +Tags)

**RefSeq:** NM\_004596.4

Plasmid: pCMV3-HA-SNRPA

Description

Lot: Please refer to the label on the tube

**Sequence Description:** 

Identical with the Gene Bank Ref. ID sequence.

**Restriction site:** HindIII + Xbal(6kb+0.89kb)

Vector: pCMV3-N-HA

**Quality control:** 

The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

Sequencing primer list :

pCMV3-F: 5' CAGGTGTCCACTCCCAGGTCCAAG 3'

pcDNA3-R: 5' GGCAACTAGAAGGCACAGTCGAGG 3'

Or

Forward T7: 5' TAATACGACTCACTATAGGG 3'

ReverseBGH: 5' TAGAAGGCACAGTCGAGG 3'

pCMV3-F and pcDNA3-R are designed by Sino Biological Inc. Customers can order the primer pair from any oligonucleotide supplier.

### Shipping carrier:

Each tube contains approximately 10  $\mu g$  of lyophilized plasmid.

#### Storage:

The lyophilized plasmid can be stored at ambient temperature for three months.

# **Plasmid Resuspension protocol**

- 1. Centrifuge at 5,000×g for 5 min.
- 2. Carefully open the tube and add 100  $\mu l$  of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than  $5000\times g$ .
- 5. Store the plasmid at  $-20 \,^{\circ}$ C.

## The plasmid is ready for:

- Restriction enzyme digestion
- PCR amplification
- E. coli transformation
- · DNA sequencing

# *E.coli* strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5 $\alpha$  and TOP10F  $\dot{}$  .

# Human SNRPA Gene ORF cDNA clone expression plasmid, N-HA tag

Catalog Number: HG16978-NY

### **Vector Information**

All of the pCMV vectors are designed for high-level stable and transient expression in mammalian hosts. High-level stable and non-replicative transient expression can be carried out in most mammalian cells. The vectors contain the following elements:

- •Human enhanced cytomegalovirus immediate-early (CMV) promoter for high-level expression in a wide range of mammalian cells.
- Hygromycin resistance gene for selection of mammalian cell lines.
- A Kozak consensus sequence to enhance mammalian expression.

Vector name pCMV3-N-HA

Vector size 6101bp

Vector Type Mammalian Expression Vector

Expression Method Constitutive ,Stable / Transient

Promoter CMV

Bacterial Resistance Kanamycin
Selection In Cells Hygromycin

Protein tag HA
