

## SMPH Crosslinker

Chemical	Properties
CAS No.:	367927-39-7
Formula:	C17H21N3O7
Molecular Weight:	379.36
Appearance:	N/A
Storage:	0-4°C for short te

Biological Description				
Description	SMPH Crosslinker is an alkyl/ether-based PROTAC linker that can be used in the synthesis of PROTACs[1].			
Targets(IC <sub>50</sub> )	Alkyl/ether: None			
In vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins[1].
